Introduction

Welcome to the XML sitemap Extension user guide. This extension helps you boost your store's SEO by automatically generating and managing XML sitemaps, ensuring better search engine visibility for your products, categories, CMS pages, and custom URLs. This guide will walk you through the installation, configuration, and usage of the extension.

Configuration

General

Enable Extension
[global]

Access Extension Settings

- **Enable/Disable** : This will allow administrators to easily enable or disable the feature based on their business needs.
- **Location** : Stores > Settings > Configuration > General > Mavenbird Extensions > XML Sitemap > General > Enable Extension

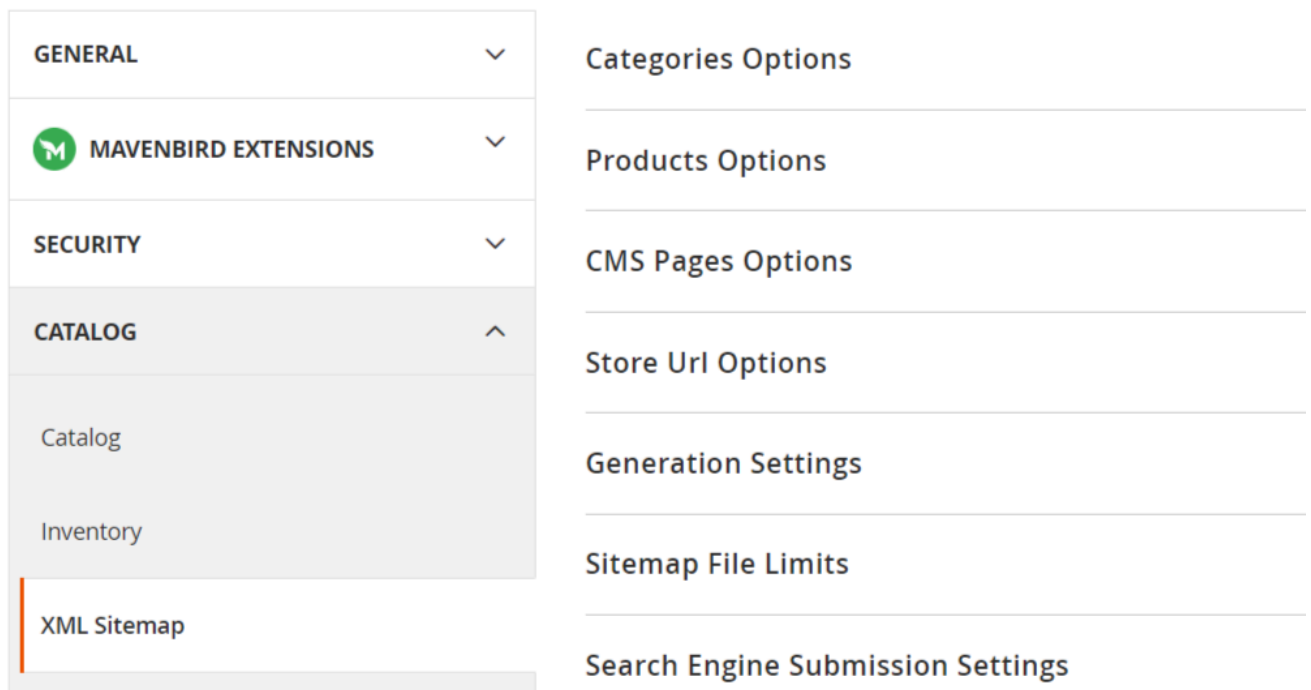

Configure Magento 2 XML Sitemap

Magento sitemap configuration usually includes two steps if you're starting from scratch. First, you need to configure the basic settings like frequency and priority of indexing, and then actually create a sitemap file.

Let's start with the basics.

Basic settings :

1. Go to **Stores > Configuration > Catalog > XML Sitemap** and go through the XML sitemap options.

The screenshot displays the Magento 2 Admin Panel's configuration interface. On the left, a sidebar menu is visible with the following items: GENERAL, MAVENBIRD EXTENSIONS (marked with a green 'M' icon), SECURITY, CATALOG, Catalog, Inventory, and XML Sitemap (highlighted with an orange vertical bar). The CATALOG item has an upward arrow, while the others have downward arrows. To the right of the sidebar, a list of configuration options is shown, each separated by a horizontal line: Categories Options, Products Options, CMS Pages Options, Store Url Options, Generation Settings, Sitemap File Limits, and Search Engine Submission Settings.

2. Set **Frequency** and **Priority** in which you want categories to be indexed within **Categories Options**.

Categories Options

Frequency [store view]	Daily	☒ Use system value
Priority [store view]	0.5	☒ Use system value

Valid values range from 0.0 to 1.0.

3. Complete **Frequency** and **Priority** settings for product options and decide whether you want to **Add product Images** into Sitemap.

Products Options

Frequency [store view]	Daily	☒ Use system value
Priority [store view]	1	☒ Use system value

Valid values range from 0.0 to 1.0.

Add Images into Sitemap [store view]	All	☒ Use system value
---	----------------------------------	--

4. Specify **Frequency** and **Priority** for indexing your **CMS Pages**.

CMS Pages Options

Frequency [store view]	Daily	☒ Use system value
Priority [store view]	0.25	☒ Use system value

Valid values range from 0.0 to 1.0.

5. Specify **Frequency** and **Priority** for indexing your **Store URL**.

Store Url Options

Frequency
[store view]

Daily

☒ Use system value

Priority
[store view]

1

☒ Use system value

Valid values range from 0.0 to 1.0.

6. Complete **General XML sitemap Settings**.

- **Enable** the sitemap generation.
- Set the **Frequency** and **Start Time** you want the XML sitemap to be updated at.
- Enter the **Error Email Recipient** who will receive a notification in case there are some errors while updating a sitemap.
- **Select the Error Email Sender** and **Template** to be used as the XML sitemap updating error notification.

Generation Settings

Enabled
[store view]

Yes

☐ Use system value

Start Time
[store view]

00 : 00 : 00

Frequency
[store view]

Daily

Error Email Recipient
[store view]

Error Email Sender
[website]

General Contact

☒ Use system value

Error Email Template
[website]

Sitemap Generation Warnings (Default)

☒ Use system value

Email template chosen based on theme fallback when "Default" option is selected.

7. Set the **Site Map File Limits**. to specify whether you'll have one sitemap file or several of them.

- Indicate the maximum number of URLs you want to be included in the sitemap in the **Maximum No of URLs per File** field.
- Enter the **Maximum File Size** to set the maximum size of the sitemap file in bytes.

Sitemap File Limits

Maximum No of URLs Per File
[store view]

50000

☒ Use system value

Maximum File Size
[store view]

10485760

☒ Use system value

File size in bytes.

8. Enable the **Submissions to Robots.txt** option to guide search crawlers on how to index your website better in the **robots.txt** file.

Search Engine Submission Settings

Enable Submission to Robots.txt
[store view]

No

☒ Use system value

Sitemap generation

Now that you set up sitemap settings, you can create your XML sitemap file.

1. Navigate to **Marketing > Seo & Search > Site Map** and press the **Add Sitemap** button.

2. Set the name of the XML file in the **Filename** field, enter the **Path** where it should be located and press the **Save & Generate** button.

Once you finish you'll find the generated sitemap in the list of sitemaps.

Automate Magento Sitemap Generation

If you've followed this guide from the start, you might have noticed this. You've already set up the auto-generation of the sitemap.

Once you fill out the **Generation Settings** in the **Stores > Configuration > Catalog > XML Sitemap** section all you need is to submit the XML file to Google Search Console. Search robots will retrieve all the data from there.

Generation Settings

Enabled [store view]	Yes	☐ Use system value
Start Time [store view]	00 : 00 : 00	
Frequency [store view]	Daily	
Error Email Recipient [store view]		
Error Email Sender [website]	General Contact	☐ Use system value
Error Email Template [website]	Sitemap Generation Warnings (Default)	☐ Use system value

Email template chosen based on theme fallback when "Default" option is selected.

Exclude Some Pages From XML Sitemap

Although Magento allows you to handle the XML sitemap seamlessly, it doesn't offer an option to disable pages from the sitemap. And that might come in handy if you have some pages that you don't want in search results.

In that case, you can resort to the Magento 2 XML Sitemap extension, that allows you to exclude pages from sitemap in Magento.

The screenshot shows the configuration interface for the 'Customer Service' page in the Magento 2 XML Sitemap extension. The left sidebar contains navigation icons for Dashboard, Sales, Catalog, Customers, Marketing, Content, Reports, Stores, and System. The main content area is titled 'Customer Service' and includes a search bar, a notification bell with 2 alerts, and a user profile icon labeled 'support'. Below the title bar, there are buttons for 'Back', 'Delete Page', and 'Save'. The configuration options are as follows:

- Enable Page:** A toggle switch set to 'Yes'.
- Page Title:** A text field containing 'Customer Service'.
- Content:** A section header with a dropdown arrow.
- Search Engine Optimization:** A section header with a dropdown arrow.
- URL Key:** A text field containing 'customer-service'.
- Meta Title:** An empty text field.
- Meta Keywords:** An empty text field.
- Meta Description:** An empty text field.
- Exclude From XML Sitemap:** A toggle switch set to 'Yes'.
- Page in Websites:** A section header with a dropdown arrow.
- Design:** A section header with a dropdown arrow.
- Custom Design Update:** A section header with a dropdown arrow.

The footer contains the copyright notice 'Copyright © 2024 Magento Commerce Inc. All rights reserved.' and the version information 'Magento ver. 2.4.7-p3'. There are also links for 'Privacy Policy' and 'Report an Issue'.
